Mr. James Baker
RCMA

Re: VOC Updates - Minimum Application Temperature for water based coatings

Dear James,

It is the position of Gardner-Gibson, that the 40 degree F used as a minimum application temperature in the RCMA response, be raised to 50 or 55 degrees F.

Three of the largest RCMA Manufacturers use 50 degrees F or greater as a minimum application temperature for waterbased coatings.

This will further our case by reducing the number of days available for application.

Sincerely,

Dan White
Technical Product Manager
